ThreeLac®

ThreeLac® is a powerful probiotic formulation of three potent microflora with a unique probiotic blend with a long history of use for maintaining healthy levels of candida albicans and supporting a balanced intestinal microbiome. The probiotic blend in ThreeLac reintroduce beneficial bacteria crowd out harmful yeast and pathogens. By resulting in the production of lactic acid it lowers that intestinal Ph to discourage yeast growth, and enhances the breakdown and absorption of nutrients.

Key Highlights

How TheeLac® Supports You

Unlike many probiotics that die in stomach acid, **ThreeLac®** uses a **micro-encapsulation process** that protects the live bacteria as they pass through the acidic environment of the stomach. Once in the alkaline environment of the intestines, the coating dissolves and releases the active bacteria where they can colonize.

This protective delivery system is a key part of why **ThreeLac®** tends to have higher survival rates and efficacy compared to standard probiotics.

TheeLac® was formulated with both gut health and vaginal health in mind, working to help maintain a healthy balance of Candida albicans and other types of yeast throughout the intestinal tract.
